

TASK: Quality Assurance

Please find any remotely controlled device in your home (such as a smartwatch, vacuum cleaner, earphones, etc.) and perform the following tasks:

1. **Prepare Test Cases:** Develop test cases to evaluate the device and its smartphone application, including testing the connection between the phone and the device. Test cases can be documented in an Excel or Word file.
2. **Execute Test Cases:** Execute the prepared test cases and document the results. Write a bug report detailing any issues encountered during testing. If no bugs are found, create a fake one.
3. **OPTIONAL:** Earn extra points by describing how you would ensure traceability between your test cases and any potential documentation of the application/system.

Expected Output of the Task:

- Document containing prepared test scenarios.
- Test execution report.
- Bug report(s).
